Organisations of today need to better leverage data resources to create value, enhance competitiveness and drive business decisions.

Leaders must take a 360° view of the extraordinary volume of data available – historic, current and predictive – so they can extract what they need and make new discoveries.

KPMG’s Data, Analytics & Modelling service helps take the mystery out of big data, working with organisations to leverage data resources and produce better business outcomes.

How we can help

Our approach is based on the proposition that business success depends on what you actually do with your business information, not how much of it you control and collate.

We can give your organisation a holistic view of your data, enabling you to learn from and use it to make better business decisions, grow revenue, enhance operational capabilities, and manage enterprise risks and compliance mandates.

With analytical and technical solutions deeply anchored in industry and functional knowledge, combined with a detailed understanding of our clients' needs, our approaches demystify data management, tackle industry-specific challenge, and cover a range of important business issues.

We can help you with:

- data analytics strategy and roadmap
- dashboards and visualisation
- execution support
- scheduling/optimisation
- compliance (controls, fraud)
- data monetisation
- bespoke models.

Industry focus

Industries we work with include:

- financial services
- technology, media and telecommunications
- consumer markets
- energy and natural resources
- healthcare.

See what we offer in your [industry](#) and how we can help you build bespoke [financial, business and cost models](#).
